Personal Summary

Highly motivated and dedicated Computer Science Student passionate about Full-Stack Engineering, Machine Learning applications and delivering exceptional user experiences. Proficient in foundational web technologies including JavaScript, HTML, and CSS, with practical experience in UI/UX prototyping using Figma and basic integration with database services.

Education

Saint Louis University | Baguio City, Philippines

Expected Graduation: July 2027

Bachelor of Science in Computer Science

- **Course:** Data Structures, Applications Development, Web Systems Development, Information Management, Software Engineering and Computer Networks

Skills

- **Technical Knowledge:** Operating Systems, Algorithms, PC Hardware
- **Frameworks & Libraries:** Next.js 14, React, Node.js, FastAPI, Prisma, NextAuth.js, SFML
- **Tools:** Visual Studio Code, Antigravity, Git, GitHub, GitLab, Supabase, Figma, MongoDB, Wamp64, Docker, VirtualBox
- **Programming Languages:** Java, CSS, JavaScript, SQL, C/C++, HTML, Python

Projects

- **Personal Portfolio Website** - Responsive Developer Showcase March 2026-Present
 - **Present HTML5, CSS3, JavaScript (ES6), Git, GitHub Actions, GitHub Pages**
 - Architected a responsive developer portfolio using HTML5, CSS3, and ES6 JavaScript, utilizing LocalStorage for persistent theme toggling and the Intersection Observer API for active navigation tracking, integrated with a GitHub Actions CI/CD pipeline to automate seamless deployment to GitHub Pages for a frictionless visitor experience.
- **Cordex** - AI-Powered Cardiac Risk Assessment App April 2026
 - **Next.js, FastAPI, PostgreSQL, XGBoost, PyTorch, SHAP, Grad-CAM**
 - A registration-free clinical tool fusing a Next.js dashboard and FastAPI backend to deploy dual-layer prognostic pipelines, pairing tree-based ensemble models and SHAP explainability with a DenseNet121 computer vision architecture and Grad-CAM localization to transform complex biometric data into instant, visual cardiac risk heatmaps.
- **Fake News Detector** - Cross-Lingual Misinformation Classifier April 2026
 - **Python, PyTorch, Hugging Face (Transformers), XLM-RoBERTa, FastAPI, Streamlit, Scikit-learn, Pandas**
 - A fake news detection platform utilizing a Streamlit UI and FastAPI REST API to serve an XLM-RoBERTa transformer fine-tuned on English news, achieving a 71.8% generalization accuracy on Filipino and Taglish bilingual snippets while returning real-time credibility ratings and attention-weighted token attributions to deliver a frictionless, transparent user experience.
- **Logic Gate Game** - Interactive Logic Circuit Simulator April 2026
 - **C11, Mongoose, Win32 API, JavaScript, SVG, HTML/CSS**
 - Developed a full-stack logic circuit simulator using a C11 logic engine and an embedded Mongoose HTTP server to serve static assets from memory; designed an interactive HTML5/SVG canvas to visualize real-time gate states and built a Win32 auto-compiler that hot-reloads code on source file changes to provide a frictionless local gaming experience.
- **NoteShare** - Collaborative Course Note-Sharing Platform March 2026
 - **C, WinSock2, Windows API, HTML5, CSS3**
 - Engineered a zero-dependency, full-stack web application from scratch in C11 using WinSock2 sockets, implementing a custom HTTP/1.1 parser, server-side template rendering, and atomic flat-file persistence to deliver a secure, session-authenticated note-sharing experience with sub-millisecond latency.
- **KengGo** - Shuttle Reservation & Fleet Operations December 2025
 - **PHP, MySQL, JavaScript, HTML5, CSS3, MVC Architecture**
 - Architected a full-stack MVC shuttle reservation and fleet management system using PHP and MySQL, implementing a transactional booking engine with automated seat-capacity checks, RESTful driver APIs, and a driver compliance portal to deliver a frictionless, reliable transit experience.
- **VitalSoft** - Multi-Branch Pharmacy Management System October 2025-December 2025
 - **React, Node.js, Express, PHP, MySQL, JavaScript, HTML5, CSS3, Bootstrap, JWT, Bcrypt**
 - Architected a secure, multi-portal web application using React, Node.js, PHP, and MySQL, implementing role-based access control (RBAC), Bcrypt-hashed credentials, and a relational database schema to deliver a frictionless prescription tracking and inventory management experience for doctors, pharmacists, and patients.
- **Core Banking Application** - Desktop Financial Management March 2025-May 2025
 - **Java, Java Swing (AWT), Object Serialization, Java Streams API**
 - Engineered a desktop core banking system using a Java Swing GUI and serialized flat-file database to securely process multi-account transactions (savings, investment, credit), leveraging Java Streams for real-time financial reporting and a custom exception hierarchy to deliver a foolproof user experience.

Seminars/Training

- **2nd International AI Edutech Summit** March 23, 2026
- **Cloud Horizons: The AWS Kickoff** March 21, 2026
- **Dyson Virtual Event** March 17, 2026
- **Trend Cyber Defense Society** March 15, 2024
 - **Leet Code** 2018-Present
